Welcome to WaveMed - The Intelligent Emergency Information Platform

WaveMed Ecosystem Platform empowers you to take control of your essential medical information by storing it securely in RadPatch or RadCard™. The App serves as a comprehensive Intelligent Emergency Information Manager.

In emergencies, time is critical. WaveMed enables first responders such as ambulance personals, doctors, hospital staff, crew leaders to instantly access your vital details - including allergies, blood type, medication and emergency contacts - simply by tapping your RadPatch or RadCard™ to an NFC-enabled smart phone.

Catching Global Growth Drivers: *tomorrow's dream - realized today*

iDataMap has launched its inaugural monthly "WaveMed Magazine," detailing the company's zero-infrastructure healthcare management ecosystem designed for emergency events and disaster preparedness, featuring power-free RadPatch wearables and RadCard™ technology within WaveMed platform. This issue will illustrate how 120 distinct scenarios across our landscape delivers one unified powerful solution designed to master every single one of the challenges with clarity and focus.

Traditional electronic health records fail during network outages, disasters and cyber attaches. WaveMed bypasses this vulnerability completely. It uses an offline-first framework powered by Near Field Communication (NFC).

- **Zero Power Requirement:** operates completely without internal batteries.
- **Zero Connectivity Reliance:** reads data with absolute zero internet access.
- **Instant Handshake:** initiates data transfer via a standard hardware tap.

The platform targets global tourism, disaster preparedness, religious pilgrimage, cybersecurity, elderly, sports and family care emergencies, through 27-language engine, with an offline access.

WaveMed scales directly across three high-value sectors:

- **Global Tourism: -** eliminates border communication barriers for international travellers.
- **The Pilgrimage Sectors -** protects high-density, multi-national crowds safely.
- **Silver Care -** secures vulnerable aging populations including those facing memory issues.

TECHNOLOGY ARSENAL - Hardware Micro-Specs & Architecture

- **RadPatch**: The Voice for the Voiceless
- **Core Philosophy**: "*It Speaks For You When You Can't*."
- **Form Factor**: Low-profile, skin-safe passive smart wearable.
- **Primary Use:** Active emergency triage and immediate response.
- **RadCard™:** Your Offline Medical Vault (needs registration)
- **Core Philosophy:** Comprehensive, deep data storage in your pocket.
- **Form Factor:** Robust, standard wallet-sized smart card.
- **Primary Use:** Cross-border medical tourism and longitudinal care.

TOWRDS GLOBAL CAMPAIGN

When the patch meets the paramedic

1 tap

from unknown patient to full emergency profile

What does it cost to save a life? A collapsed runner, an unfamiliar city, and a paramedic who taps the patch on the runner's shorts and - before the stretcher is level - knows the blood type, the beta-blocker, the allergy to penicillin, and who to call. No login, no network, no guessing and has the choice of 27 languages. The difference between generic treatment and informed treatment is measured in minutes, and the patch gives those minutes back.
