

vWaveMed App
Instant Medical Info

Islamic pilgrimage groups + airline partnership

ISLAMIC PILGRIMAGE OPERATOR × AIRLINE × LOCAL HOSPITALS

From departure gate to return gate, one patch.

Issued by the airline before boarding, read by cabin crew in flight, by local rescuers at the holy sites and by the home hospital after return. Seamless safety built by the pilgrimage operator and the airline together.

Locate

The blue cross on the body

Tap

Back of a smartphone, 1 second

Read

Blood type · allergies · medication · contacts

SCAN THE PATCH. SAVE A LIFE.

RadPatch™ · Personal Emergency Information System Patch

No battery · No internet · 1 second
26 languages · Waterproof

01 · WHAT RADPATCH IS

A patch the size of a fingernail speaks for you.

RadPatch™ is a personal emergency information system patch no bigger than a fingernail. Inside it you keep your blood type, allergies, current medication, diabetes emergency information and emergency contacts. When an accident or sudden illness leaves you unable to speak, anyone nearby holds a smartphone to the patch for one second and the information appears on the screen. No battery, no internet, no login. The information is encrypted inside the patch, not on a hospital server, and only you can change it with your PIN.

Three moves and it is done

01

Locate

Find the RadPatch on the helmet, watch strap, collar, bag or phone case. The blue cross is designed to be seen.

02

Tap

Hold the back of a smartphone (Android 8.0 or newer, or a recent iPhone) to the patch for one second. With WaveMed, or the responders' vWaveMed app, the screen opens by itself.

03

Read

Blood type, allergies, medication, diabetes emergency information and contacts appear in the reader's own language. 26 languages switch automatically, so it works abroad.

What goes inside the patch

- Name · date of birth · sex
- Blood type
- Allergies (drugs, food, insect stings)
- Current medication and doses
- Diabetes emergency information
- Emergency contacts (family, carer)
- Doctor · insurance (optional)

You choose what goes in. Only the information you want is stored.

Why a patch, not paper or an app alone

Needs no power

A passive, battery-free design. Nothing to charge, and what you store stays there until you erase it.

Survives water, sweat and the washing machine

A silicone body with a sealed chip: two layers of waterproofing. Pools, sea water, showers and the washing machine are all fine.

Readable without internet

In a mountain with no signal, a building in a blackout or a disaster zone, one smartphone is enough. If every server is down, the information is still on your body.

Your information stays yours

Stored encrypted, changed only with your four-digit PIN. Readers can only read, and other apps cannot open it.

WHY IT MATTERS · ISLAMIC PILGRIMAGE GROUPS + AIRLINE PARTNERSHIP

A pilgrimage is a journey where the airline, the operator and the local hospitals each act separately, and in an accident the information falls between them. RadPatch on the body joins the three. The airline issues it at check-in, the operator adds the group leader's number, the local hospital reads it in Arabic. On the flight home the crew read it again and the home hospital takes over. On no leg of the journey does a pilgrim become a nameless patient.

02 · IN MOMENTS LIKE THESE

Kuala Lumpur → Jeddah → Makkah → home

Departure	At the airline counter every pilgrim receives an airline-logo band, written in one pass by the Desktop Writer from the list the operator sent.
Holy sites	A pilgrim collapses at Arafat; Saudi paramedics read the band in Arabic. The group leader and the airline's local office are contacted.
Return	Crew on the return flight read the same band and check on him in the cabin. After landing, the home hospital takes over.

How it is used**Issued by the airline**

Issued at check-in, doubling as a frequent-flyer gift. The airline logo on the wrist throughout the pilgrimage.

In-flight check

The reader app on crew phones; elderly pilgrims' condition checked before take-off.

Hand-over after return

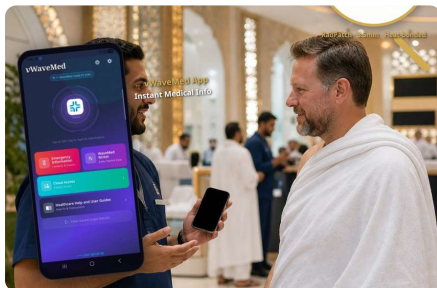

Local treatment notes added to the patch, read as is by the home hospital.

Operator's list

The operator sends the list (CSV) and the Desktop Writer at the counter writes patches in list order.

Local partner hospitals

Partner hospitals in Jeddah and Makkah read the band and connect with the airline's local office.

Where it goes**Multilingual support for pilgrims****The whole family****Even in ihram**

Iron-on, hair-straightener or sticker: three ways to attach it. Watch straps, collars, helmets, bags, shoes, phone cases, even a pet collar. Attach it once and it can be read anywhere.

Two apps, both free**WaveMed — for the owner and carer**

Enter your information, write it to the patch and update it with your PIN. Includes health logs, a document folder and nearby hospital search.

vWaveMed — for paramedics, emergency responders and fire crews

Used by paramedics, emergency staff, fire crews, hospitals, and also family and neighbours. Tap to read only; nothing can be changed. Shown in the reader's language.

Even in a disaster like the Nepal earthquake

When cell towers fall and the power goes out, hospital servers and the cloud are unreachable. RadPatch is read with a single rescuer's phone. A foreign rescue team sees your blood type and allergies in their own language. Where there is no communication, the information on your body is the only information there is.

03 · NO PATCH NEEDED. THE APP ALONE

From departure to home, the pilgrim's record in hand.

Even without a patch, one WaveMed app lets a pilgrim carry vaccination proof, insurance papers, a medication schedule and emergency information in 26 languages.

KEYWORDS FOR THIS AUDIENCE

Vaccine type & lot no. as PDF

Insurance & claim papers kept

A record per family member

Medication schedule · Completed

Blood sugar in both units

Medicine Finder · INN

Find ER · call a ride

Emergency info, 26 languages

01 Before departure

“ Asked for proof of vaccination at a border, can a pilgrim name the vaccine type and lot number on the spot? ”

VACCINATION RECORD · PDF

Vaccine, date, dose, type, where it was given, lot number and injection site are kept as one card, and each record exports as a PDF.

“ When papers are requested mid-pilgrimage, can a pilgrim pull up the insurance certificate and claim documents right there? ”

DOCUMENTS · INSURANCE

Insurance certificates, diagnosis letters and test results go into each person's document folder as photos or PDFs, so a claim never starts with gathering them all again.

“ The whole family on pilgrimage, parents included: can one phone keep each person's record apart? ”

MY FAMILY · SELECT MEMBER

Add and select members on the Healthcare Management home screen, and each person keeps their own blood sugar, blood pressure, medication and vaccination records.

02 At the holy sites

“ On a packed pilgrimage day, can an elderly pilgrim be sure by evening that the morning pills were taken? ”

MEDICATION SCHEDULE · COMPLETED

Name, dose, time and times per day become a dated schedule. Each dose is marked Completed as it is taken, so a missed one stands out, with reminders and calendar sync.

“ When home and the holy sites use different blood sugar units, can a pilgrim show both at once? ”

BLOOD SUGAR LOG

Enter it once and both units appear together: 120 mg/dL (6.7 mmol/L). Nothing to convert. Calendar, 30-day trend and PDF work the same either way.

“ Medicine runs out at the holy sites. How does a pilgrim explain it to a pharmacist who speaks another language? ”

MEDICINE FINDER

A thousand of the world's most-used medicines, carried in 26 languages. Switch the language inside the screen and the same medicine appears in theirs. When words fail, hand over the phone.

“ In a Jeddah or Makkah pharmacy, how does a pilgrim check the box handed over is the same medicine as at home? ”

MEDICINE FINDER · INN

Every entry carries its English INN, the international non-proprietary name. Show the local name and the INN side by side and the pharmacist can confirm it on the spot.

03 · NO PATCH NEEDED. THE APP ALONE · 2

03 When it is urgent

“In streets packed with crowds, can a pilgrim tell how many metres away the nearest emergency room or open pharmacy is?”

MAP · FIND CARE

A 300 m radius is drawn around where you stand, and hospitals, clinics and pharmacies are found out to 2.5 km and listed nearest first, with routes and travel time.

“Among endless rows of tents with no address and no signage, how does a pilgrim tell anyone where they are?”

MAP · SATELLITE · SHARE

Switch to satellite and the buildings and terrain are simply there. GPS holds without a signal, a map you have already looked at is kept, and coordinates and a link still send on a weak connection.

“Separated from the group and needing a hospital now, how does a pilgrim call a car?”

MAP · RIDE HAILING

Drop the pin on where you are going and the app opens with the destination already filled in. Uber, Bolt, Grab, Kakao and the services people actually use in that country are added automatically, around 60 countries.

04 When they cannot speak

“If a pilgrim collapsed at the holy sites, could their emergency details be read in the local language?”

EMERGENCY INFO · REPORT LANGUAGE

Change the app's language and the emergency screen and the report follow, in 26 languages. Anything chosen from a list comes out translated; notes you typed yourself stay as you wrote them.

“And when a pilgrim collapses in the crowd and cannot speak, who tells them the blood type and allergies?”

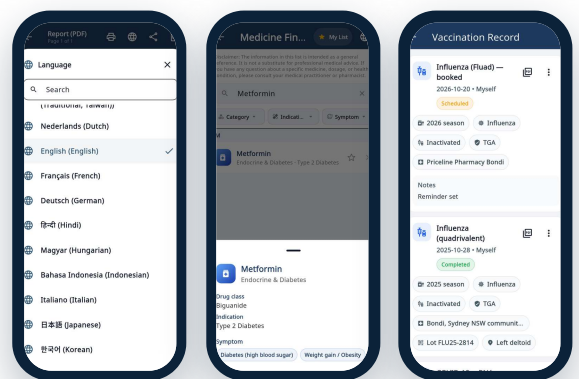

EMERGENCY INFO

The emergency screen opens without a lock: blood type, allergies, medications, diabetes emergency information and next of kin on one page. This is the point where a patch starts to matter.

NEXT — OPTIONAL

The patch is for the moment you cannot speak for yourself.

Use the app for a while and one problem is left over: who opens your record when you are unconscious, or when your phone is not with you. RadPatch solves that one thing. Whatever you put in the app today carries straight across the day you add a patch.

Emergency info

Medicine Finder

Vaccination record

04 · ECOSYSTEM · HOW IT IS MADE

Everything connects around one patch.

RadPatch is never used alone. The owner's app, the responders' app, the desktop that organisations use for bulk registration, the ride call that gets you to hospital, the wallet-sized RadCard and the cloud all form one system around a single patch. There are 120 scenarios, and one solution.

120 scenarios, one solution — WaveMed Magazine Special Issue 03, "The Technology Solution"

WaveMed — for the general population

Enter your own and your family's emergency information, write it to the patch, and keep health logs and documents.

Emergency Ride Call

Uber, Kakao T, Bolt, Grab and the other ride services of that country, straight to the nearest hospital.

vWaveMed — for paramedics and emergency responders

One-second read at the scene. Read-only, nothing can be changed, shown in the reader's language.

RadPatch · RadCard

A patch worn on the body and a card carried in the wallet. Same data format, so the same apps read either.

WaveMed Desktop Intelligent Manager

Hospitals, organisations and groups register hundreds of people in list order with a reader. The centre of the hospital supply model.

Path A · Path B

Two supply paths — Path A: individuals register with the app · Path B: organisations issue in bulk with the desktop

Intelligent Iron-ON (I²OP) production workflow

1 · Chip integration

The chip and antenna are embedded in a flexible substrate and covered with adhesive film.

2 · Lamination

Several layers are pressed with heat into one thin patch.

3 · Application

Iron, hair straightener or sticker attaches it to clothing, gear and bags.

4 · Distribution

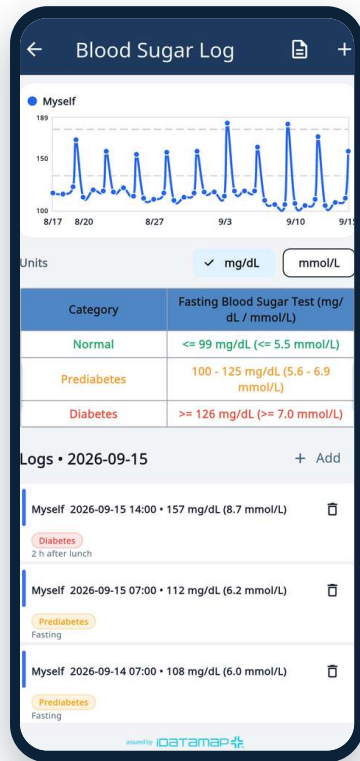

Only genuine, certified patches can be written by the apps. Supplied to partners worldwide.

05 · HEALTH MANAGEMENT IN THE APP

Numbers kept as records. Trends shown as graphs.

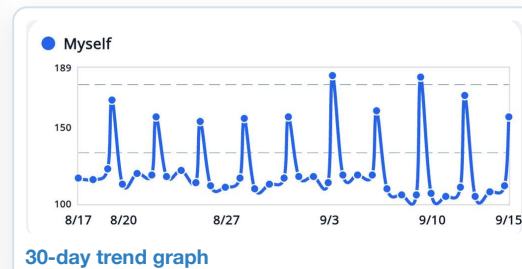

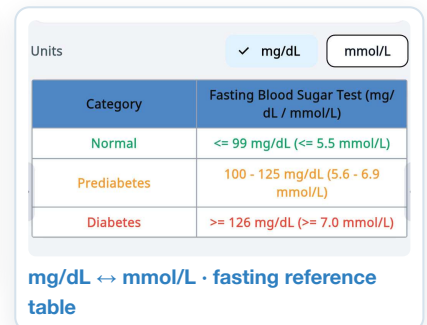

Blood sugar, blood pressure, medication, supplements and vaccinations. Log them by date and the app builds the calendar and a 30-day trend graph, ready to export as a PDF. No patch and no account needed to start today.

01

Blood sugar: a 30-day trend in both units

Each fasting or after-meal reading lands straight on the 30-day trend graph. Enter it once and mg/dL and mmol/L appear together, with the fasting reference table (normal, prediabetes, diabetes) on the same screen.

mg/dL ↔ mmol/L together

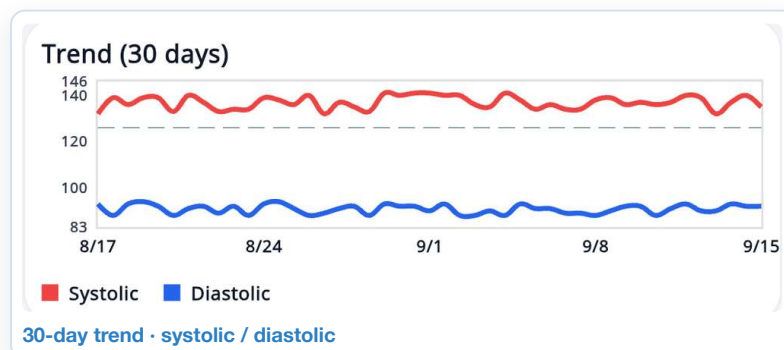

Fasting · 2 h after a meal

Calendar · PDF export

02

Blood pressure and heart rate at a glance

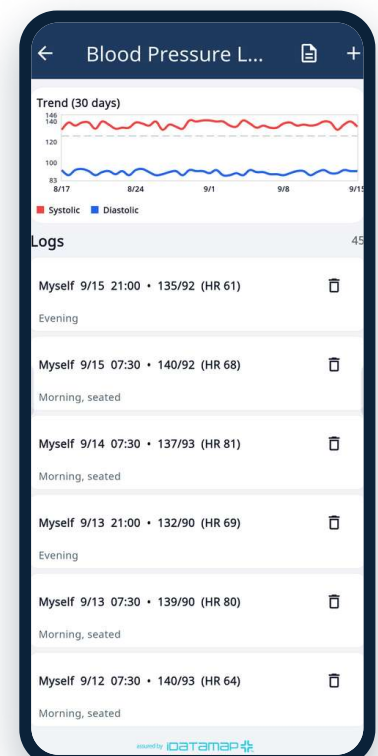

Systolic and diastolic pressure draw side by side as a 30-day trend. Every entry keeps the heart rate (HR) and a note such as "morning, seated" or "evening", so you know how each reading was taken.

Systolic · diastolic 30-day trend

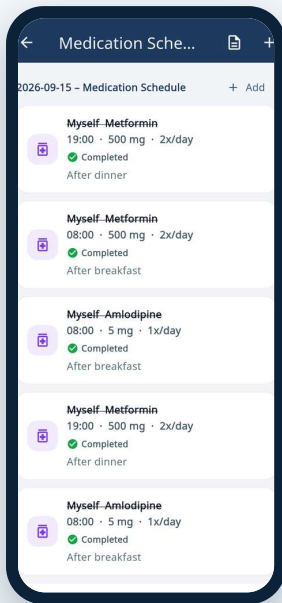

Heart rate on every entry

Notes on how it was measured

05 · HEALTH MANAGEMENT IN THE APP · 2

Medication, supplements, vaccines, and one dashboard.

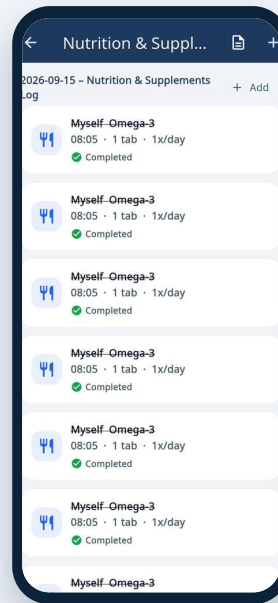

03

**Medication schedule:
taken, and recorded**

Name, dose, time and times per day become a dated schedule. Each dose is marked Completed as it is taken, so a missed one stands out, with reminders and calendar sync.

Completed marks

Reminders · calendar

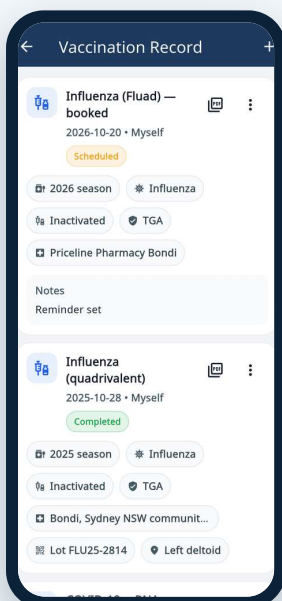

04

**Nutrition &
supplements: what,
and how much**

Product, dose, time of day and times per day, logged by date, with a 30-day trend and a PDF. Supplements and prescriptions can be seen as one list.

Logged by date

30-day trend · PDF

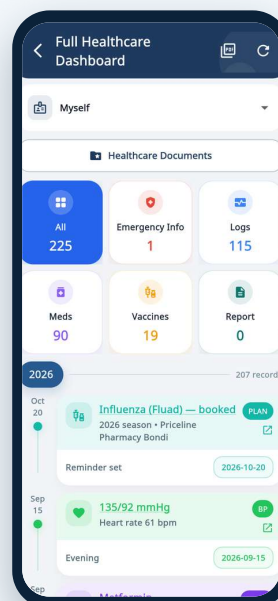

05

**Vaccination record, for
the day proof is
needed**

Vaccine, date, dose, type, where it was given, lot number and injection site are kept as one card, and each record exports as a PDF.

Lot number · site

PDF per record

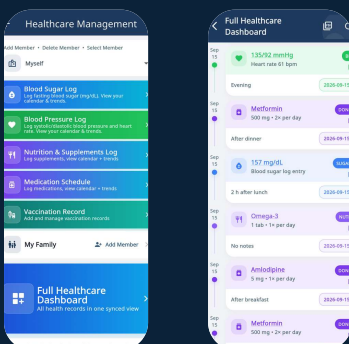

06

**Full Healthcare
Dashboard**

Blood sugar, blood pressure, medication, supplements, vaccines and emergency info join one dated timeline. Counts by type sit up front, Healthcare Documents is one tap away, and the view exports as a PDF.

One timeline

Healthcare Documents · PDF

WAVEMED

One family member at a time

On the Healthcare Management home screen, select yourself or a family member and keep each person's records apart.

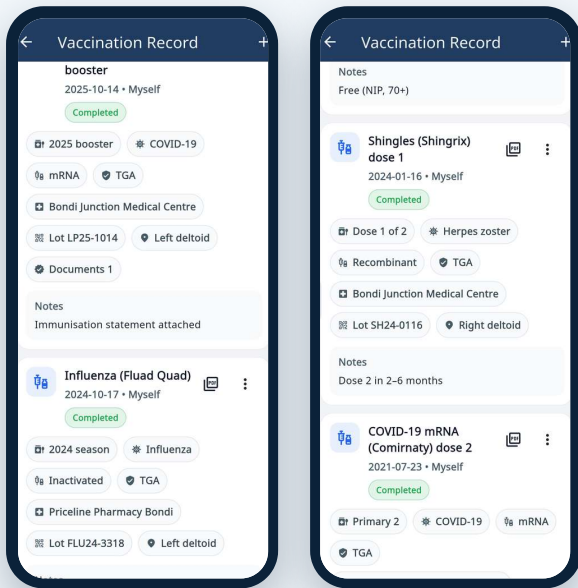

05 · VACCINATION CERTIFICATES AND DOCUMENTS

Certificates attached to the record.

Papers filed by folder.

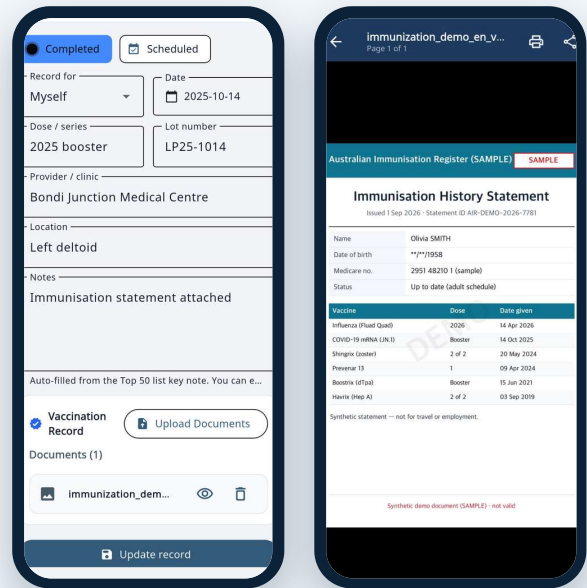

Vaccination history, travel vaccines included

Influenza, shingles, COVID-19, Tdap, hepatitis A and travel vaccines such as typhoid build up as dated cards, each with dose, vaccine type, where it was given, lot number, injection site and a note.

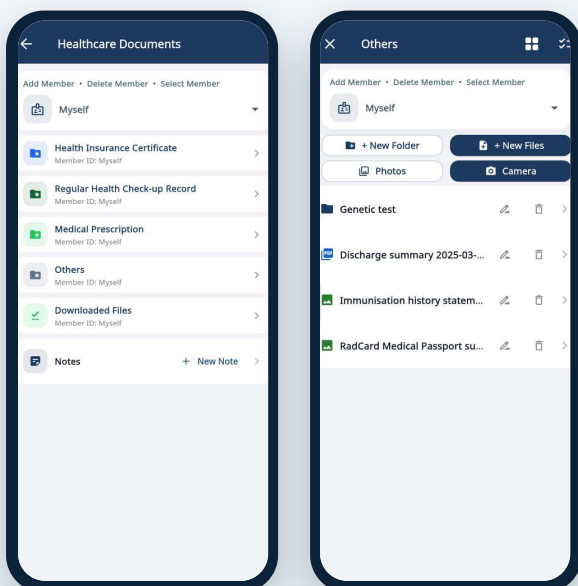

Attach the certificate to the record

Upload the vaccination certificate as a document on each record. Choose the vaccine and the disease, vaccine type and authority fill in; the attached certificate opens inside the app, ready to print.

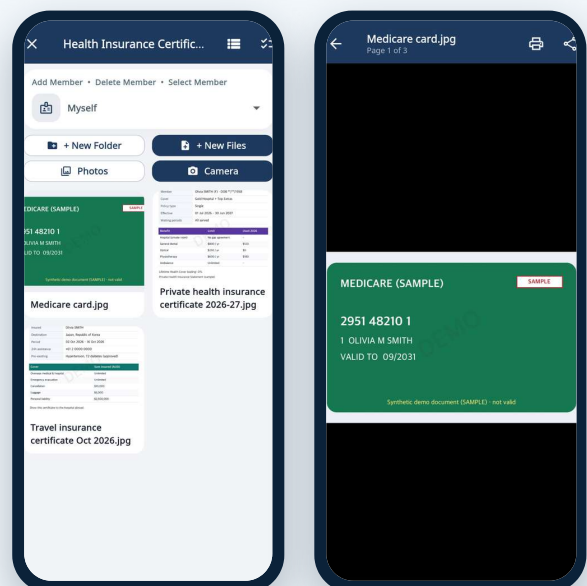

Healthcare documents, filed by folder

Insurance certificates, check-up records, prescription lists, other papers and downloaded files each have a folder, for every family member. Add a new folder or file, a photo, or use the camera.

Insurance certificates, open when needed

Health insurance eligibility statements and private medical or travel insurance certificates show as thumbnails, and open full-screen to show or print.

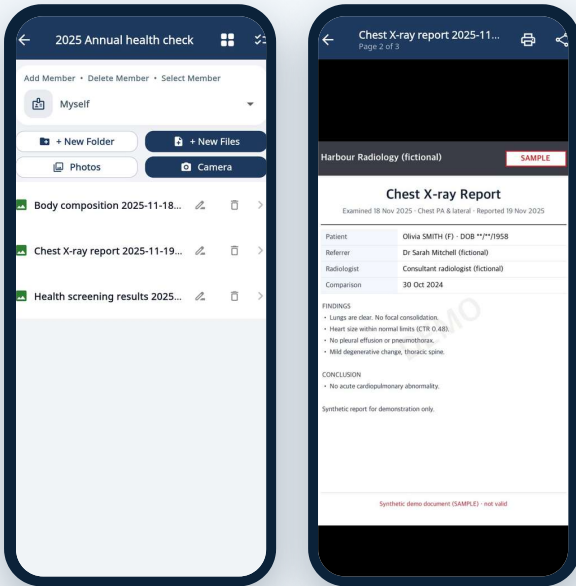

05 · CHECK-UPS, PRESCRIPTIONS AND LANGUAGES

Paper kept as photos.

Emergency info and medicines in their language.

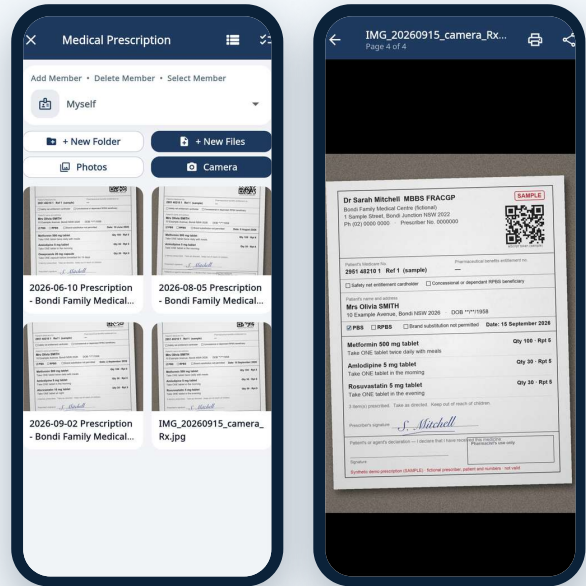

Check-up records, one folder a year

Make a folder for each year's national health screening and keep the results letter, chest X-ray report and blood test results inside. Browse them as thumbnails and open any one to read.

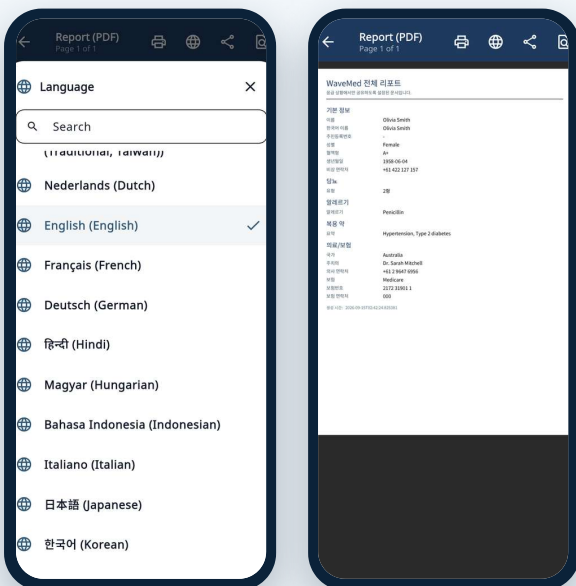

Upload a prescription with the camera

Tap Camera in the prescription list and photograph the paper prescription; it goes straight into that person's folder as a dated file. No more loose papers from every pharmacy.

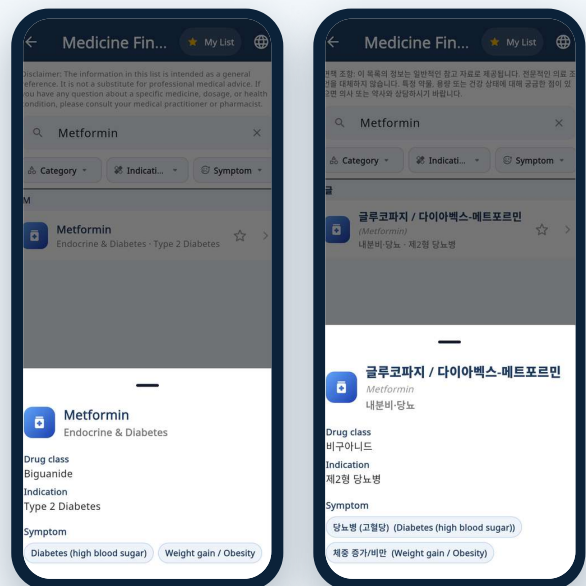

Emergency report: pick a language, on the spot

Choose a language on the report screen and the same emergency information is rebuilt in it, in 26 languages. Headings and items chosen from a list change to that language; notes you typed stay as you wrote them.

Medicine Finder: your medicine in the local language

Search by name and the brand names appear with the English INN, drug class and indication. Switch the language on the screen and the same medicine changes to that language: 1,000 medicines, 26 languages.

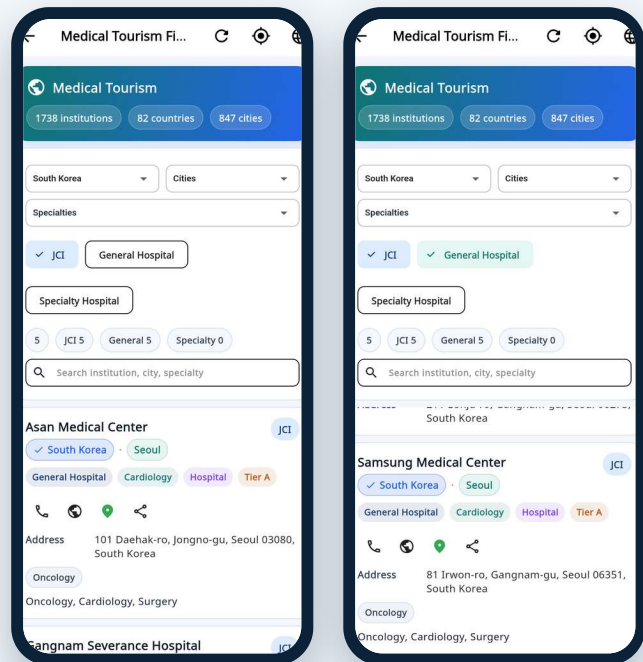

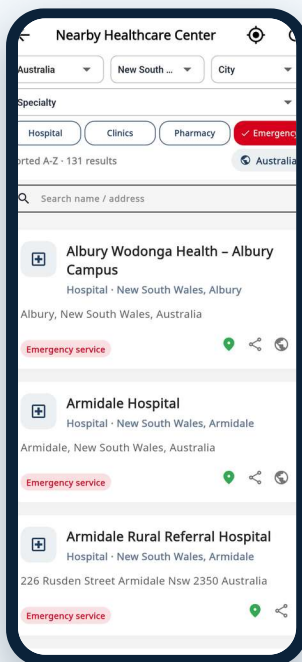

05 · ABROAD, AND WHEN IT IS URGENT

Hospitals and the way there, even somewhere new.

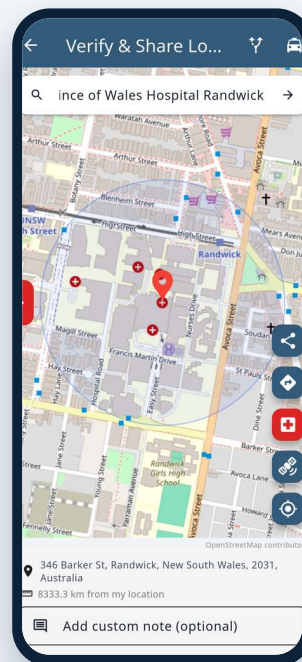

Medical tourism: 1,738 facilities in 82 countries

Search hospitals abroad by country, city and specialty, and narrow the list to JCI-accredited, general or specialist hospitals. Each one shows its address, phone, website and map location.

Nearby medical centres: find an emergency room

Choose country, city and specialty, filter by hospital, clinic, pharmacy or emergency centre, and hospitals that run an emergency room are marked. Search by name or address and open the map location in one tap.

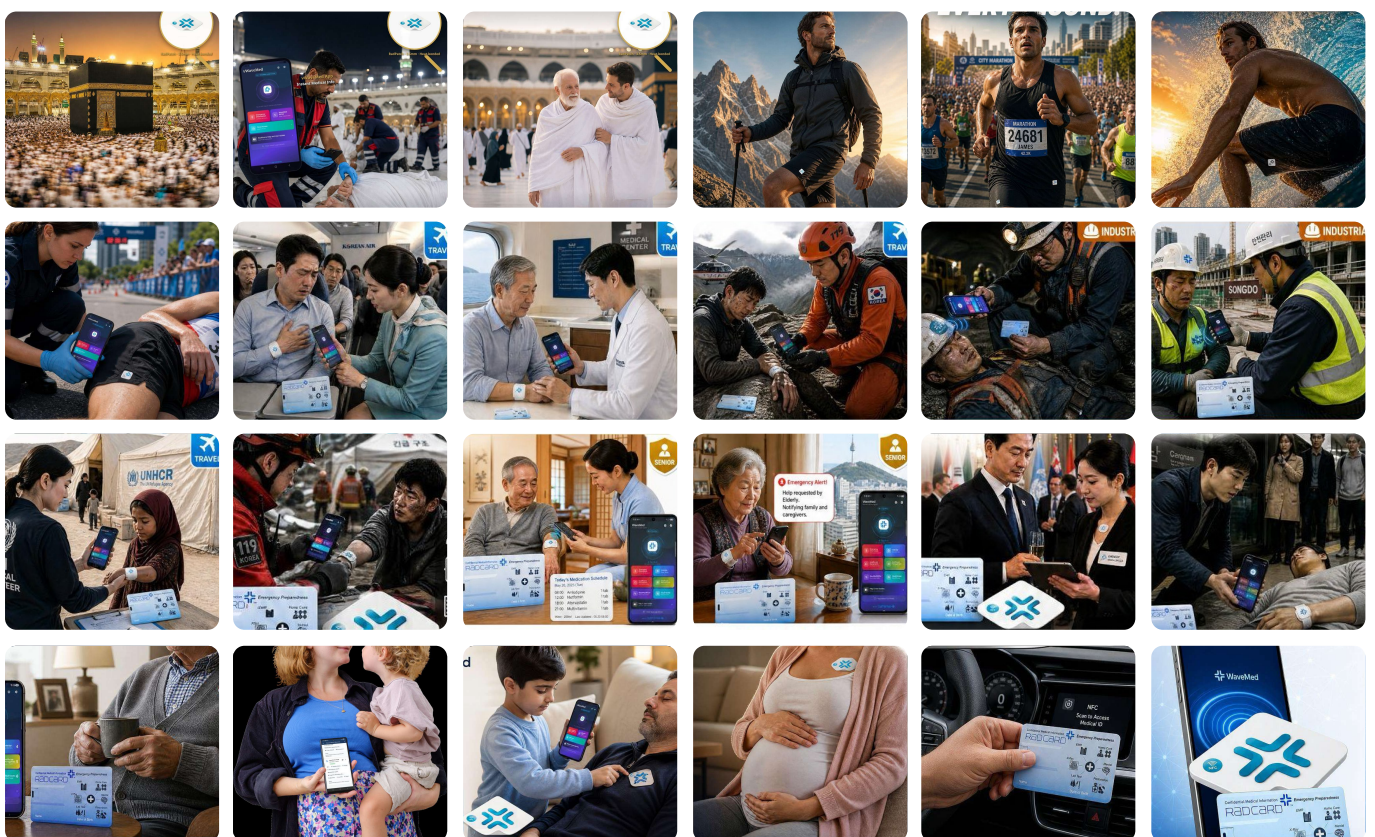

Verify & share location, on one map

Search a place and the map shows the pin and the hospitals around it, with the address and the distance from where you are. Share, directions and ride buttons sit on the map, and you can add a note before sending.

Watch straps, collars, bags, helmets, shoes, phone cases, pet collars. Attach it once and the same information is read anywhere.

Pilgrimage, mountains, aircraft, hospitals, industrial sites, disaster zones. Shown in the reader's language.

06 · GETTING STARTED

Five minutes today and you are ready.

1

Install the app

Scan the QR code and get WaveMed from Google Play / App Store. It is free and needs no account.

2

Enter your details and write the patch

Name, date of birth, blood type and an emergency contact; add allergies and medication as needed. Hold the phone to the patch to save. A four-digit PIN appears. Write it down.

3

Attach it and forget it

Put it where you always carry it. When your medication changes, read the patch, enter the PIN and update. Nothing else to do.

Frequently asked questions**Q. Who holds the information, the airline or the operator?**

Neither. It exists only on the pilgrim's patch; the airline and operator only help with issue and contact registration.

Q. Which phones can read it?

Any current smartphone. Most Android phones on 8.0 or newer, and recent iPhones.

Q. Can strangers read my private information?

The patch holds only what you chose to show in an emergency. Changing or erasing it needs the PIN, and apps other than the WaveMed family cannot open it.

At a glance

Size	Fingernail-sized (from 3.5 × 3.5 mm), thin and flexible
Material	Silicone · machine washable
Waterproof	Double sealed (silicone body + sealed chip)
Power	None (passive)
Reading	Any smartphone, 1 second · no internet needed
Security	Encrypted · 4-digit PIN · only genuine patches can be written
Languages	26, shown automatically
Apps	WaveMed (owner) · vWaveMed (paramedics, responders, fire crews) · free

WORKING TOGETHER**Working with airlines and operators**

1. Start with one season and one charter flight; we provide bands and the counter Desktop Writer.
2. Twenty minutes of reader-app training for crew and group leaders; connection to local partner hospitals.
3. After the season we compile response cases and extend to scheduled routes.

Even without a patch, the app alone gives you**Your health log**

Blood pressure, blood sugar, medication and supplements by date, with a 30-day trend.

Document folder

Check-up results, prescriptions and vaccination certificates as photos or PDFs, ready when asked.

Family records

Separate records for your children and parents, printed as a one-page report.

Fastest nearby hospital and pharmacy search

Every hospital and pharmacy around you, nearest first, with the country's emergency number.

Local transport in every country

Uber, Kakao T, Bolt, Grab and the other ride services of that country, one tap to the hospital.

iDataMap Corporation Pty Ltd · Radcard Korea Co., Ltd.

Radcard Korea · 441 Gangnam-daero, Seocho-gu, Seoul · info@radcard.com · +82-10-4909-7467

radcard.com · idatamap.com

RadPatch and WaveMed store and display emergency information you entered yourself. They do not replace medical care or first aid. In an emergency, call your local emergency number first.

When you cannot speak, the patch speaks for you.

RadPatch is the smallest way to carry the emergency information you chose, on your body. No battery, no internet, no account.
